

Glitter PET Self-Adhesive Film - TAG Digital®

TECHNICAL DATA SHEET

Description:

The **Glitter PET Self-Adhesive Film - TAG Digital®** is a decorative polyester film designed to create a sparkling and textured surface effect. Available in 7 different colours, it provides dynamic light reflections and a strong visual impact, making it ideal for interior decoration and design applications such as furniture wrapping, wall covering, retail environments and exhibition displays.

The product offers a cost-effective solution to transform surfaces without major renovation work, while delivering a premium decorative finish. Inspired by architectural decorative films, it enhances spaces with a modern and visually striking appearance.

Characteristics:

The film is made of polyester (PET) with a glitter textured surface providing a sparkling decorative effect. It has a thickness of 180 µm and offers good dimensional stability, flexibility and resistance to handling. It is designed for application on flat or slightly curved surfaces.

It is equipped with a semi-permanent clear adhesive offering a good balance between adhesion and removability, and a liner ensuring stability during application.

Application guidelines:

Apply on clean, smooth and dust-free surfaces. The material is intended for interior use on flat or slightly curved substrates such as furniture, panels and walls.

For optimal results, installation should be carried out in a controlled environment. Dry application is recommended.

Durability:

The maximum recommended duration of use is up to 1 year depending on application conditions and environment.

Storage:

1 year when stored between 10°C and 25°C and at a relative humidity of around 50% in the original packaging.

Adhesion:

Initial adhesion: ≥ 4.5 N/25 mm

Peel strength 180° (24h): ≥ 9 N/25 mm

Final adhesion: after 24 hours

Application temperature: 10°C to 40°C

Service temperature: -20°C to +80°C

Note:

The information in this data sheet is based on laboratory tests and experience gained in practice. It does not constitute a legal guarantee. A test prior to use must be carried out.

Durability is estimated based on exposure conditions in Central Europe. The actual life of the product depends on substrate preparation, exposure conditions and maintenance of the marking. Outdoor performance degradation can be expected when the films are exposed southward, if applied in areas with high temperatures such as Southern European countries, or in polluted areas.
