

## Ultra-Clear PET Film 210 µm - TAG Digital®

### TECHNICAL DATA SHEET

#### Description:

The **Ultra-Clear PET Film 210 µm - TAG Digital®** is a high-clarity polyester film designed for applications such as window posters, light boxes, bus shelters and backlit displays. It offers excellent optical transparency and high-quality visual rendering, making it suitable for premium graphic applications.

#### Characteristics:

The **Ultra-Clear PET Film 210 µm - TAG Digital®** is coated on the front side to ensure excellent ink adhesion and print quality.

The reverse side is protected by a static protective film that prevents scratches and damage during handling, printing and installation, improving durability and ease of use.

The film is suitable for applications such as mirror printing with white ink, allowing viewing from the reverse side with a uniform gloss finish.

#### Printing:

Compatible with solvent, eco-solvent, UV, latex and screen-printing inks.

#### Durability:

The maximum recommended duration of use is 3 years.

#### Storage:

1 year when stored between 15°C and 25°C and at a relative humidity of 45 to 55% in the original packaging.

#### Note:

The information in this data sheet is based on laboratory tests and experience gained in practice. It does not constitute a legal guarantee. A test prior to use must be carried out.

Durability is estimated based on exposure conditions in Central Europe. The actual life of the product depends on substrate preparation, exposure conditions and maintenance of the marking. Outdoor performance degradation can be expected when the films are exposed southward, if applied in areas with high temperatures such as Southern European countries, or in polluted areas.
