Please note:

The information in this data sheet is based on laboratory tests and practical experience. It does not constitute a legal guarantee. A test must be carried out before use.

Durability is estimated according to the exposure conditions in Central Europe. The actual lifetime of the product depends on the preparation of the substrate, the exposure conditions and the maintenance of the marking. Degradation of outdoor performance can be expected when films are exposed to the south, if they are applied in areas where temperatures are often high, such as in southern European countries, or in polluted areas.
